boatasy™
DOCKHOOK

Fast onboard docking

DOCKHOOK is a new telescopic multifunctional boat hook for boaters who are looking for the simplest and fastest way to attach or release the dock-lines from onboard.

The unique **patented flexible spring locker** guarantees fast attachment and release of the loop lines (lasso) on a cleat, pylon, bollard, or buoy. Now available also for thicker ropes. Yellowhead has been carefully designed to support different solutions once on berth: holding the loop lines (lasso), passing the ropes, pushing away from and pulling towards other objects, piers, lifting things out of the water, etc.

The new boat hook is easy to use even by less experienced crew or solo skippers.
